

Product Intelligence Platform Securely Scales on Observian Managed Security

The Challenge

The customer maintains a highly dynamic environment with ephemeral architecture, short-lived hosts powered by lots of automation. These fast-moving components generated large volumes of alerts that might have arisen from a host no longer running. This quantity of alerts, and lack of contextual insight, resulted in significant overhead for their internal resources.

The Solution

Integrating Lacework's ML behavioral analysis & anomaly detection with Observian's managed services and extensive security expertise, the customer was able to significantly improve the signal to noise ratio for incoming alerts and offload the overhead of triage and initial investigations, receiving detailed, actionable reports for each security incident that demands their attention.

The Benefits

Higher Signal to Noise Ratio

Observian enables the customer's engineers to focus on innovating, not investigating!

Lower Administrative Overhead for Alerts

Observian's security experts take on resource intensive tasks of monitoring, alerting & triage.

Initial Triage by Cybersecurity Experts

Observian's security experts to monitor, detect, investigate, & respond to events.

About Observian, Inc. and Amazon Web Services

Observian is a AWS Advanced Consulting Partner focusing on Cloud Services & Software Delivery. Observian provides Cloud Migrations, Software Modernization, DevOps & CI/CD Transformation, & AWS Security/Compliance Expertise to accelerate your cloud journey!

Amazon Web Services provides the customer with cutting-edge services, reliable uptime, blazing fast performance, secure infrastructure, and endless automation options that let its skilled software teams run massive workloads with less overhead.
