Observian Helps Bridge Achieve a Secure, Resilient, and Cost-Optimized Cloud Infrastructure

.:: BRIDGE

Bridge, a leading learning and performance management platform, faced the challenge of separating from its parent company while distilling its delivery environments into modern, low-cost, easily managed cloud-enabled services. To achieve this goal, Bridge engaged with Observian, an AWS-certified expert in architecture design, to provide security best practices, cost and performance optimization, resilience, scalability, and ease of management.

The Challenge
Following a separation from their parent company, Bridge underwent significant efforts to distinguish its operating environments and workflows in support of its newly independent operations. At the same time, Bridge was focused on distilling its delivery environments into modern, low-cost, easily managed cloud-enabled services to boost reliability and security, guarantee scalability, and minimize cost. In support of these efforts, Bridge engaged with Observian to provide AWS-certified expertise in architecture design to capture security best practices, cost and performance optimization, resilience, scalability, and ease of management.

Observian recommended a security assessment, a Well Architected Review, and development of a multi-account strategy and build-out.

The Solution
Observian conducted a security assessment and Well-Architected review, and developed a multi-account strategy and build-out of their AWS accounts to assist with the design, development, implementation, migration, and stabilization of new infrastructure. As a result, Bridge achieved a resilient, secure, and optimized AWS infrastructure, with 14.28% savings over their previous costs.

About Observian
Observian is an AWS Level 1 MSSP Competency Partner and is closely partnered with industry leaders like Datadog, Lacework, Fortinet, and Check Point. Observian's managed service offering removes the complexity and cost of Cloud Security & Compliance.
